

## **Collision tumours**

**Study of the International Dermoscopy Society (IDS)**  
**[www.dermoscopy-ids.org](http://www.dermoscopy-ids.org)**

### **Coordinators**

Andreas Blum  
a.blum@derma.de

### **Aim**

To evaluate the dermoscopic features of collision tumours of benign and malignant skin tumours.

### **Method**

International, multicenter, retrospective and observational study of collision tumours. Reports of histopathology are demanded in doubtful cases.

### **Data collection**

Please provide age, sex, location, dermoscopic image of the collision tumour and if available the result of histopathology.  
Please provide only anonymized dermoscopic images (e.g. image-001 etc.), no clinical image, no name or birthday (e.g. in an excel file).  
In the case of any missing data, no further inquiry of the study coordinator will be possible to the sending centre and the case will not be available any more for this study.  
Data collection will be closed in December 2012.

### **Data analysing**

The collected data of collision tumours will be analysed about the combination of the different diagnoses.

### **Manuscript for publication**

Everyone who sends complete cases will be named in a possible manuscript; if the number of participating colleagues is too high for the journal, the maximum of colleagues according to the number of included cases will be named and the remaining colleagues will be included into the "Group of IDS Recurrent Lesions Collection" which refers to the list of all participating colleagues into the manuscript.

### **Coordinator of the data collection**

Andreas Blum  
a.blum@derma.de

**No financial funding or support.**

**21. October 2011**
